

Project Design Phase-II

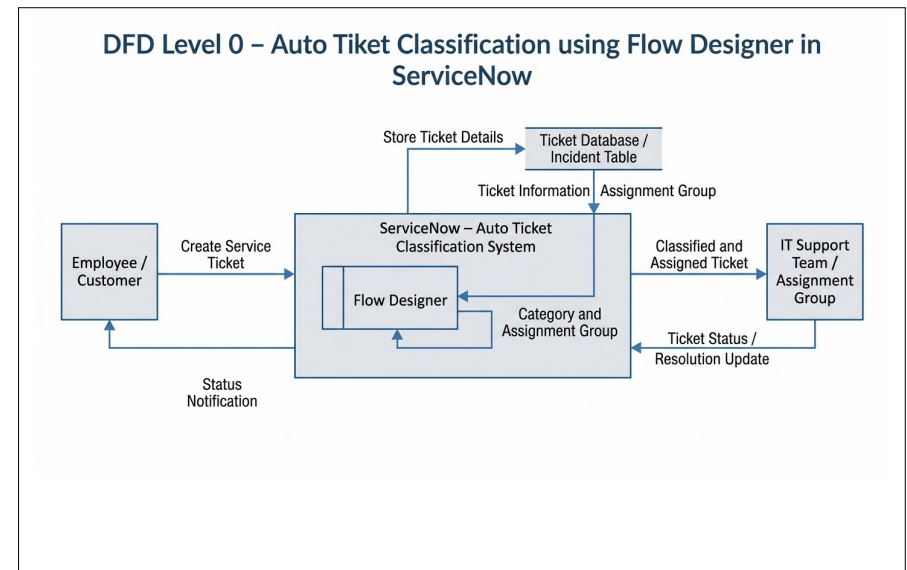

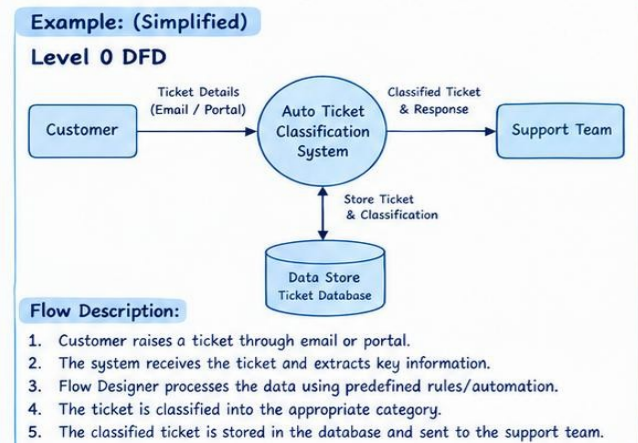

Data Flow Diagram & User Stories

Date	01 October 2026
Team ID	SWTID-2026-1711
Project Name	Auto Ticket Classification Using Flow Designer
Maximum Marks	4 Marks

Data Flow Diagrams:

A **Data Flow Diagram (DFD)** is a visual representation of how data moves through a system. It shows where data comes from, how it is processed, where it is stored, and where the resulting information is sent. For the **Auto Ticket Classification using Flow Designer in ServiceNow** project, the DFD represents the flow of a service ticket from creation to automatic classification and assignment. When a user submits a ticket, the ticket details are stored in ServiceNow. **Flow Designer** processes the ticket information, identifies the appropriate category based on the configured conditions, and automatically assigns the ticket to the corresponding support group. The DFD helps explain the interaction between the **User, ServiceNow, Flow Designer, Ticket Database, and Support Team**, providing a clear understanding of how the automated ticket classification process works.

Example: (Simplified)

User Stories

Use the below template to list all the user stories for the product.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Employee / Customer	Service Ticket Creation	USN-1	As an employee, I can create a service ticket by entering the issue details so that my problem can be processed by the support team.	I can submit a ticket with the required information and receive a ticket number.	High	Sprint-1
Employee / Customer	Service Ticket Creation	USN-2	As an employee, I can provide a clear description of my issue so that the system can identify the appropriate ticket category.	The ticket description is successfully saved and available for classification.	High	Sprint-1
IT Support Team	Ticket Configuration	USN-3	As an IT support member, I can view the details of newly created service tickets.	I can view the ticket description, category, priority, and other relevant details.	High	Sprint-1
Administrator	Ticket Configuration	USN-4	As an administrator, I can define ticket categories such as Hardware, Software, Network, and Access.	The required categories are available for ticket classification.	High	Sprint-1
Administrator	Flow Designer	USN-5	As an administrator, I can create a Flow Designer flow that starts when a new service ticket is created.	The flow is triggered automatically when a new ticket is submitted.	High	Sprint-1
Administrator	Flow Designer	USN-6	As an administrator, I can configure conditions in Flow Designer to identify the appropriate ticket category.	The flow evaluates the ticket information and selects the appropriate category based on the configured conditions.	High	Sprint-1
IT Support Team	Auto Ticket Classification	USN-7	As an IT support member, I want tickets to be automatically classified based on their details so that manual classification is reduced.	A newly created ticket is automatically assigned the appropriate category when the defined conditions are satisfied.	High	Sprint-2
IT Support Team	Auto Assignment	USN-8	As an IT support member, I want classified tickets to be automatically assigned to the appropriate support group.	The ticket is routed to the correct assignment group based on its classification.	High	Sprint-2
Administrator	Flow Actions	USN-9	As an administrator, I can configure Flow	The configured fields are	High	Sprint-2

			Designer actions to automatically update ticket fields.	updated automatically after the flow executes.		
IT Support Team	Ticket Processing	USN-10	As an IT support member, I can view automatically classified and assigned tickets so that I can start working on them.	The support team can view the classification and assignment details of the ticket.	High	Sprint-2
Administrator	Exception Handling	USN-11	As an administrator, I can handle tickets that do not match any predefined classification condition.	Unmatched tickets remain available for manual review and are not incorrectly assigned.	Medium	Sprint-2
Tester	Testing & Validation	USN-12	As a tester, I can test the flow using different types of service tickets.	The flow correctly classifies and assigns tickets for the defined test scenarios.	High	Sprint-2
Employee / Customer	Ticket Status	USN-13	As an employee, I can view the status of my submitted ticket after it has been classified and assigned.	The ticket status and assignment information are available to the employee.	Medium	Sprint-2
Administrator	Documentation	USN-14	As an administrator, I can document the classification rules, flow configuration, and testing results.	The project documentation contains the implementation steps and test results.	Medium	Sprint-2
