

Functional & Performance Testing Template

Model Performance Test

Date	01 October 2026
Team ID	SWTID-2026-1711
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	

Test Scenarios & Results

Test Case ID	Scenario (What to test)	Test Steps (How to test)	Expected Result	Actual Result	Pass/Fail
FT-01	Ticket Creation Validation	Enter valid and invalid ticket details, including the required fields, and submit the ticket.	Valid tickets should be created successfully and validation should be shown for missing mandatory fields.	Ticket creation and field validation worked as expected.	PASS
FT-02	Automatic Ticket Classification	Create tickets with different descriptions such as hardware, software, and network issues.	The system should automatically classify the ticket according to the configured conditions.	Tickets were automatically classified according to the configured classification rules.	PASS
FT-03	Automatic Assignment Group Selection	Create tickets belonging to different categories and verify the assigned support group.	The ticket should be automatically assigned to the appropriate support group.	Tickets were successfully assigned to the appropriate support groups.	PASS
FT-04	Flow Execution Validation	Create a new ticket and verify the Flow Designer execution.	The flow should trigger automatically and execute all configured actions successfully.	The Flow Designer flow triggered and completed successfully.	PASS
FT-05	Unclassified Ticket Handling	Create a ticket that does not match the predefined	The system should handle the ticket using the configured	Unmatched tickets were handled successfully	PASS

		classification conditions.	default handling without flow failure.	without flow failure.	
PT-01	Flow Execution Time Test	Create tickets and observe the time taken for classification and assignment.	The flow should execute within the defined performance target.	Flow execution completed within the expected time during testing.	PASS
PT-02	Multiple Ticket Processing Test	Create multiple tickets with different categories and observe their processing.	All tickets should be processed correctly without failures or incorrect assignments.	Multiple tickets were processed successfully without failures.	PASS
PT-03	Flow Reliability Test	Execute the flow repeatedly with different ticket descriptions and monitor the execution status.	The flow should execute consistently for different ticket types.	The flow executed successfully and consistently for the tested ticket types.	PASS

Testing Summary

Testing Type	Test Cases	Passed	Failed
Functional Testing	5	5	0
Performance Testing	3	3	0
Total	8	8	0

Overall Result

Total Test Cases: 8

Passed: 8

Failed: 0

Overall Pass Rate: 100%

Conclusion

All functional and performance test cases were successfully executed. All 8 test cases passed with no failures. The Auto Ticket Classification using Flow Designer successfully classified and assigned service tickets according to the configured conditions and performed reliably during testing.
