

User Acceptance Testing (UAT)

Date	01 October 2026
Team ID	SWTID-2026-1711
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	10 Marks

Project Overview:

Project Name: Auto Ticket Classification using Flow Designer

Project Description: The project automates the classification and assignment of ServiceNow tickets using Flow Designer. Based on the configured conditions and ticket information, the system identifies the appropriate ticket category and automatically routes the ticket to the relevant support group.

Project Version: Version 1.0

Testing Period: 01 October 2026 to 01 October 2026

Testing Scope:

Features and functionalities tested:

- Service ticket creation and field validation
- Automatic ticket classification
- Classification based on configured conditions
- Automatic assignment to the appropriate support group
- Flow Designer trigger execution
- Flow Designer actions and conditions
- Handling of unmatched/unclassified tickets
- Multiple ticket processing
- Flow execution and reliability

User stories / requirements tested:

- Create a service ticket with the required information.
- Automatically classify a newly created ticket.
- Automatically assign the ticket to the appropriate support group.
- Execute the configured Flow Designer workflow.
- Handle tickets that do not match predefined conditions.
- Process multiple ticket types successfully.

Testing Environment:

Application: ServiceNow Developer Instance

Module: Flow Designer / Service Management

Environment: ServiceNow Development Environment

URL/Location: ServiceNow Developer Instance

Credentials (if required): Authorized project team account

Test Cases:

Test Case ID	Test Scenario	Test Steps	Expected Result	Actual Result	Pass/Fail
TC-001	Service Ticket Creation	1. Open the ticket form. 2. Enter the required ticket details. 3. Submit the ticket.	Ticket should be created successfully with the entered information.	Ticket was created successfully with the required information.	PASS
TC-002	Automatic Ticket Classification	1. Create a new service ticket. 2. Enter a description representing a specific issue type. 3. Submit the ticket. 4. Verify the classification.	The ticket should be automatically classified according to the configured conditions.	Ticket was automatically classified according to the configured conditions.	PASS
TC-003	Automatic Assignment	1. Create a classified ticket. 2. Allow the Flow Designer flow to execute. 3. Check the assignment group.	Ticket should be assigned to the appropriate support group.	Ticket was successfully assigned to the appropriate support group.	PASS
TC-004	Flow Designer Trigger	1. Create a new ticket. 2. Check the Flow Designer execution. 3. Verify the flow status.	Flow should trigger automatically when the ticket is created and execute successfully.	Flow triggered automatically and executed successfully.	PASS
TC-005	Classification Conditions	1. Create tickets with different issue descriptions. 2. Execute the flow. 3. Verify the category for each ticket.	Each ticket should be classified according to the configured conditions.	Tickets were classified correctly according to the configured conditions.	PASS
TC-006	Unclassified Ticket Handling	1. Create a ticket that does not match the predefined conditions. 2. Execute the flow. 3. Check the resulting ticket.	The ticket should be handled using the configured default logic without flow failure.	The unmatched ticket was handled successfully without flow failure.	PASS
TC-007	Multiple Ticket Processing	1. Create multiple tickets with different issue types. 2. Allow the flow to process them. 3. Verify classification and assignment.	All tickets should be processed and assigned correctly.	Multiple tickets were processed successfully without failures.	PASS

TC-008	Flow Reliability	1. Execute the flow using different ticket inputs. 2. Monitor the execution results. 3. Verify the final ticket records.	The flow should execute successfully and consistently for the tested ticket types.	The flow executed successfully and consistently during testing.	PASS
---------------	------------------	--	--	---	-------------

UAT Result Summary:

Total Test Cases	Passed	Failed	Pass Rate
8	8	0	100%

Bug Tracking:

Bug ID	Bug Description	Steps to reproduce	Severity	Status	Additional feedback
BG-001	No defects identified during UAT.	Not applicable.	—	Closed / No Bug	All tested functionalities worked as expected.

No bugs were identified during User Acceptance Testing. All test cases were completed successfully.

Notes:

- Both positive and negative ticket scenarios were tested.
- Different ticket types were used to verify the classification conditions.
- Automatic ticket assignment was verified.
- Flow Designer execution was verified.
- Unmatched ticket handling was tested.
- All 8 UAT test cases passed.
- No defects were identified during testing.
- The UAT result was a 100% test-case pass rate (8/8).
