Brainstorm & Idea Prioritization:

The **“Auto Ticket Classification using Flow Designer”** project focuses on automating the ticket management process in ServiceNow. The main idea is to use ServiceNow Flow Designer to automatically analyze incoming tickets based on their details and classify them appropriately. The system can automatically select the relevant category and priority, identify the correct assignment group, and route the ticket to the responsible team. It can also send notifications to the concerned team and update the ticket status automatically. By automating these activities, the project helps reduce manual work, save processing time, improve ticket classification accuracy, and ensure that tickets are handled efficiently. Overall, the proposed solution aims to make the ServiceNow ticket management process faster, more accurate, and more efficient.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Step-2: Brainstorm, Idea Listing and Grouping

Step-3: Idea Prioritization
