Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	4 Marks

Empathy Map

An empathy map is a simple visual tool used to understand the experiences, needs, behaviours, and challenges of users interacting with a system. It helps the project team view the problem from the user's perspective. For the **Auto Ticket Classification using Flow Designer in ServiceNow** project, the empathy map helps us understand the difficulties faced by employees and IT support teams while creating, classifying, and assigning service tickets. Understanding the user's expectations and challenges helps us identify the actual problems in manual ticket classification and design an automated solution using **ServiceNow Flow Designer**. This ensures that tickets can be classified and routed efficiently, reducing manual effort and improving the overall IT support experience.
